

FLOWER SHOP MANAGEMENT SYSTEM

Team members: Fruja Andreea-Maria, Ionascu Monica

General Description:

This application aims to help both the customers and the manager by giving them the possibility to offer easy access to their bouquets of flowers to the clients.

The manager will be able to login with an admin account, whilst the customers will be able to create an account that will have a unique username and a password. After creating an account and logging in, a customer will be able to pick a flower type and browse through their bouquets. When finding a bouquet they like, the customer will be able to order it. The customers will all be able to see all the past orders and their status.

After logging in, the manager will be able to add and remove type of flowers/bouquets from their listing and see all their orders and update the status of the orders (pending, processed and delivered).

Registration (for both Customer and Manager):

The user needs to register by selecting either the role of the customer or manager and will need a unique username and a password (and other basic information like name/ company name, address and phone number. When logging in if the password or username is incorrect an error message will be displayed.)

The Manager:

The manager can add or delete type of flowers/bouquets after logging in. (Each item will contain the name, price).

Also, after logging in, they will see a list of their orders.

From the list of orders, the manager can give the customer information about their order by changing the status of it (pending, processed and delivered).

The Customer:

Customers need to login into the application where they will be able to see a list with all the bouquets. (The list will be searchable by the type of bouquets)

A logged in customer can also see the type of flowers of a specific bouquet (by selecting them).

Also, logged in customers can select any quantity for any number of flowers for a bouquet, and create an order containing the selected items.

A logged in customer can also see a list of past orders, with their status. (pending, processed, delivered)
